

MAXI-HGH™

Feel and Look Your Best With This Amino Acids Drink Mix*

- Promotes healthy aging of the heart, skin, and brain*
- Supports normal growth hormone levels*
- Optimizes body composition*
- Improves exercise recovery*
- Boosts energy*

The secret to youthful skin, good cardio health, recovering after your workout, and staying lean is your body's natural production of human growth hormone (HGH).^{*} Unfortunately, as you age, HGH levels decline—from age 21 to 61 they drop 80%! Certain amino acids act as HGH secretagogues, nutrients that support the body's own natural HGH release.^{*} DaVinci[®] Laboratories included a special blend of these five amino acids in Maxi-HGH™ drink mix in order to maximize your HGH levels.^{*} L-Glutamine, L-arginine, L-ornithine, L-lysine, and glycine are combined in just the right amounts to encourage the release of stored growth hormone and a healthy aging process.^{*}

Promotes a Youthful Mind and Body*

When the body releases HGH, it circulates to the liver where it's converted to insulin growth factor-1 (IGF-1).^{*} Healthy IGF-1 levels decrease body fat, enhance lean body mass, make the skin more elastic and touchable, keep the brain sharp, boost libido, and can improve energy and mood.^{*} With age, circulating levels of IGF-1 take a tumble. You can look and feel your best by supporting HGH release and healthy IGF-1 levels as you age.^{*}

Keeps the Heart Healthy*

By releasing HGH and IGF-1, Maxi-HGH™ supports heart health.^{*} When there's enough IGF-1 in the body, it leads to better metabolism of fats and cholesterol.^{*} IGF-1 also keeps cardiac cells healthy and encourages a healthy heart.^{*}

Stay Lean and Trim*

The amino acids in Maxi-HGH™ promote healthy IGF-1, which burns fat.^{*} This stops you from packing on the pounds and supports lean muscle mass.^{*} Supporting healthy HGH and IGF-1 levels also reduces sugar cravings.^{*} What's more, the amino acids in Maxi-HGH™ help stimulate the body's production of glucagon-like peptide-1 (GLP-1), an intestinal hormone that contributes to a feeling of fullness after eating.^{*}

Recover Faster After Exercise*

HGH stimulates tissue repair, so making sure your levels are optimal can make your muscles feel comfortable after exercise.^{*} IGF-1 also boosts energy levels so you'll be motivated to maintain daily workouts.^{*}

Maxi-HGH™ is recommended for:

- Aging skin*
- Staying lean as you age*
- Low muscle mass*
- Cholesterol and triglycerides in the normal ranges*
- Heart health*
- Occasional low energy*
- Exercise intolerance*
- Memory*

Suggested Use: As a dietary supplement, mix 10.95 g (approximately 1 scoop) per day in 8 oz. juice or water and take on an empty stomach at bedtime or right after strenuous exercise or as directed by your healthcare practitioner.
