

PERIO PLUS STIX » A tasty and convenient dental formula designed to support periodontal health in dogs.

Perio Plus Stix has been designed to encourage a daily periodontal care program in a dual action, hassle free delivery system.

Perio Plus Stix provides an outer layer that promotes plaque control and removes bacteria. The inner layer supports gum tissue integrity and freshens breath.

Dental Health:

- » According to the American Veterinary Dental Society, 80-85 percent of all pets have periodontal disease. That number jumps to 100 percent in pets over 4 years of age. In fact, it is the number one health problem diagnosed in dogs and cats.
- » Dental health is important to the overall health of your pet because it affects the health of the heart, lungs and kidneys, which is why it is important to provide your pet with proper daily dental care before there is a problem.
- » Perio-Plus Stix is formulated specifically for use between routine veterinary dental cleanings to help maintain clean teeth, freshen breath, control plaque formation, and support gum health.

ABOUT THE INGREDIENTS IN PERIO PLUS STIX:

Plaque Control:

- » Pumice (outer layer) is a natural abrasive that reduces plaque and bacteria that can lead to bad breath.
- » Natural Zeolites (inner layer) are unique minerals that help prevent plaque from forming and sticking to teeth.
- » Zinc (inner layer) penetrates plaque on the teeth and oxidizes it, resulting in less plaque formation.

Gum Tissue Support:

- » Coenzyme Q10 (inner layer) is an essential catalyst for the creation of energy at the cellular level to support gum tissue function. Tissue levels of CoQ10 decrease as pets age. Deficiencies of CoQ10 have been associated with improper functioning of the heart muscle and gum tissue.

- » Cranberry (inner layer) is a source of antioxidants rich in bioflavonoids that support gum tissue health. They also help interfere with bacteria that can lead to plaque buildup and tissue destruction.
- » Taurine (inner layer) works with zinc to support gum tissue health and strength. Strong gum tissue is important since bacteria grows on dead tissue.
- » Probiotics (inner layer) help support a healthy bacterial balance in the mouth. They help the body displace unhealthy plaque-causing bacteria to support strong gums and fresh breath.
- » Yucca Schidigera Extract (outer layer) is an herb that helps inhibit enzymes that break down the structural integrity of gum tissue.

Fresh Breath Support:

- » Champex™ brand Champignon Mushroom Extract (outer layer) has been studied extensively for its ability to suppress odor-causing chemicals in the intestines and preventing foul breath at the source.
- » Cinnamon (outer layer) supports a healthy bacterial balance in the mouth.
- » Spirulina and Parsley (outer layer) are great sources of the deodorizing and cleansing Chlorophyll.

Perio Plus Stix are:

- » Easy to use and highly palatable. Dogs love them!
- » Easy to remember
- » Easy to give due to its great taste and smell
- » A no stress, no mess, no hassle daily dental program
- » A guilt-free way to support periodontal health
