

# Advanced allergy & immune support

Promotes a balanced gut, stronger immune system, and healthy histamine response.

Combines krill meal with probiotics and a powerful blend of botanicals to help manage seasonal or environmental allergy symptoms.

Hydrolyzed duck flavor suitable for pets who are sensitive to common food allergens.

## ALLERGY PLUS

### Recommended for:

- › Support for seasonal allergies
- › Support for environmental allergies
- › Paw licking
- › Occasional redness of ears or paws
- › Periodic itchy, dry skin associated with seasonal or environmental allergies
- › Additional immune support
- › Dogs of all sizes and ages

Allergy Plus supports immune health and skin health and comfort with antioxidants, probiotics, and Omega-3 essential fatty acids in a convenient daily chew. It's safe to give as-needed or daily, all year long.

#### Ingredient Highlights:

##### › QRILL™ Pet Krill Meal

Made from sustainably harvested Antarctic krill. Krill meal is rich in Omega-3 essential fatty acids. Omega-3s help support strong and healthy skin and contribute to a healthy immune system, and are more bioavailable in krill than in other sources. Krill is also a key source of astaxanthin, a naturally occurring, multifunctional antioxidant that helps to regulate the histamine response to common allergens.

##### › Anivestin™

A plant-based and patented blend of two botanical extracts—Chinese Skullcap (*Scutellaria baicalensis*) and *Acacia catechu*—that provides antioxidant benefits to protect cells against oxidative damage. It also supports immune health, promotes a normal histamine response, and supports healthy inflammation in the body. Anivestin™ is highly compatible with other ingredients, making it a perfect addition to the formula.

##### › *Lactobacillus sakei* proBio65

A probiotic strain that is ideal for supporting skin health and immune system function in dogs with seasonal or environmental allergies. proBio65 is more resistant to gastric acidity and antibiotics than other probiotics, and supports the health and comfort of both gut and skin. It also helps to manage the inflammatory response of the skin when triggered by allergens. Consistent use of probiotics like *Lactobacillus sakei* proBio65 can also support a healthy immune system.
