

Better Ingredients, **BETTER RESULTS**

Comprehensive formula contains more active ingredients than other leading brands

Features clinically proven ingredients including green-lipped mussel, glucosamine, MSM and chondroitin sulfate

Promotes joint health, comfort and mobility in cats of all ages

Delicious soft chews are suitable for pets with dietary sensitivities and great for picky eaters

GLYCOFLEX® PLUS

Recommended for:

- › Joint health
- › Healthy recovery
- › Managing occasional discomfort and soreness
- › All cats in need of superior joint support
- › Improved mobility

GlycoFlex® Plus features clinically proven ingredients to support joint health, comfort and mobility in cats of all ages.

GlycoFlex® Plus for cats is a powerful joint support formula including more active ingredients than other leading brands. Available in deliciously flavored chews, **GlycoFlex® Plus** helps cushion joints, ease discomfort and improve mobility.

About our ingredients:

- › GlycOmega™ brand *Perna canaliculus* is a green-lipped mussel from an exclusive New Zealand source. Perna is rich in amino acids, essential minerals, omega fatty acids, vitamins, and glycoproteins that provide the foundation for joint health. Unlike Perna extracts and mussel powders that lack important fatty acids, GlycOmega™ Perna utilizes the whole organism to provide maximum support for joints.
- › DMG is naturally produced in an animal's body. This compound supports physical and mental energy levels, promotes efficient oxygen utilization in tissues, and it acts as an antioxidant to maintain joint health.
- › Glucosamine has been shown to support the production of glycosaminoglycans (GAGs) within the cartilage matrix and synovial fluid. As a cat ages, there is a decrease in the production of GAGs, which can result in joint stress, thinning of synovial fluid, and the breakdown of connective tissue. Glucosamine also supports bladder and urinary tract health by supporting the integrity of the mucosal lining.

› MSM is a source of organic sulfur that supports the structure of joints and connective tissue. Increased availability of MSM is linked to comfort and mobility, as well as the support of collagen production.

› Manganese is required for the formation of collagen, GAGs, and proteoglycans, all of which support required cartilage integrity. A lack of manganese can lead to inefficient production of GAGs within the joints.

Antioxidants:

- › Vitamin C
- › Vitamin E
- › Grape Seed Extract
- › Selenium
- › L-glutathione

The antioxidants in our formula help support immune system response, proper detoxification function, free radical neutralization and a healthy inflammatory response.
