

# GLYCOFLEX<sup>®</sup> » +PLUS

Glucosamine, Chondroitin, MSM,  
Antioxidants, plus Perna Mussel for  
Dogs of All Sizes

**GlycoFlex<sup>®</sup> Plus** joint supplement for dogs provides clinically proven nutritional joint support for working dog breeds, competitive and senior dogs.

When your dog gets up more slowly to meet you at the door, you know he's not just tired. It's time for added joint support. **GlycoFlex<sup>®</sup> Plus**, an advanced joint support supplement for dogs of any age, now available in a tasty chewable tablet.

**GlycoFlex<sup>®</sup> Plus** is a high quality nutritional joint support product that maintains comfort and mobility for working dog breeds, competitive and senior dogs. This new formula for hip and joint care includes more active ingredients than other leading brands including glucosamine, MSM, perna and, chondroitin sulfate, for maximum nutritional benefit.

#### About our ingredients:

» GlycoOmega<sup>™</sup> brand *Perna canaliculus* is a green-lipped mussel from an exclusive New Zealand source. Unlike Perna extract-based products and mussel powders, which may lack important fatty acids and other bioactive components (e.g. defatted powders or extracts), the entire organism is utilized in GlycoOmega<sup>™</sup> Perna. All **GlycoFlex<sup>®</sup>** products are formulated with GlycoOmega<sup>™</sup> Perna.

- » Chondroitin is the primary building block of cartilage. Healthy cartilage covers the ends of bones and acts as shocker absorbers during everyday activities.
- » Glucosamine has been shown to support the production of glycosaminoglycans (GAGs) within the cartilage matrix and synovial fluid. As your dog ages, there is a decrease in the production of GAGs, which can result in joint stress, thinning of synovial fluid, and the breakdown of connective tissue. Glucosamine also supports bladder and urinary tract health by supporting the integrity of the mucosal lining.
- » MSM is a source of organic sulfur. It supports the structure of joints and connective tissue. Increased availability of MSM is linked to comfort and mobility, as well as the support of collagen production.
- » Manganese is an essential mineral for the formation of collagen, GAGs, and proteoglycans, all of which support required cartilage integrity. A lack of manganese can lead to inefficient production of GAGs within the joints.

#### PRODUCT DETAILS:

GlycoFlex<sup>®</sup> Plus is recommended for dogs of all ages needing advanced joint support. This powerful combination of ingredients helps cushion joints, promote cartilage building and alleviate discomfort caused by normal daily activities.
